

RELIABLE 10 GBPS E-BAND WITH **8" ANTENNA**

UltraLink™-GX80 is based on state-of-the-art RF transceiver technology capable of providing high transmit power and receiver sensitivity. Combined with Intracom Telecom's advanced modem technology it offers the highest system gain at 10 Gbps in the E-Band market. For your short-range deployment up to 2 miles, UltraLink™-GX80 can dramatically improve service availability from 99.9% to 99.99% and save significant cost by using an 8-inch antenna compared to competing products having to use much larger antennas.

2-MILES HOP ANNUAL RAIN AVAILABILITY

UltraLink™-GX80 supports Ethernet/IP, with a rich set of standards-based L2 and L3 networking features for the delivery of Carrier Ethernet and IP/MPLS-based services. Due to its ultra-high capacity, low latency and support for advanced packet synchronization methods, it fully satisfies the rigorous transport requirements of modern access.
